### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: applicant recites a control system for operating model trains comprised of a switch for selecting various command protocols for the model train, a plurality of selection devices, mounted on a handheld remote control for choosing the operating feature desired by the operator. A controller is connected with the remote device and the switch and generates command messages to send to the train car that are originated at the remote device by the operator. The messages are sent from the controller to the train car by a transmitter connected to the controller and to the track of the system.

The prior art made of reference, taken singularly or in combination, does not adequately disclose the features recited in the instant claims. Specifically, Young et al discloses a control for model vehicles using a remote control and a transmitter. The system sends a signal from a remote control through a transmitter and the signal is then sent through the DC track to the train. A switch is used in Young et al; however, it is not a switch like that of the present invention. The switch of Young et al is more a traditional railroad switch and it is not connected or associated with the signal generation of the remote control or with the transmitter used to convey multiple signals to the model vehicle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
